

DAY-2

Self

- Self is the reference to the object created of our class.
- It is passed whenever we are calling any method.
- Only an object can access or helpful in connecting attributes and methods inside our class.

Magic Methods (dunder)

- They are Special methods in python which are defined inside class.
- They begin and end with double underscore (--)
- They have a special where in they get called themselves.

Creation → `__init__`

Print → `__str__`

+ → `__add__`
